

Parts Inventory a Problem?

RGIS can help!

RGIS can save you time, improve parts inventory accuracy, offer faster customer service, enhance employee satisfaction and reduce your day-to-day parts department headaches.

RGIS will manage the inventory process from planning through reconciliation, allowing you to concentrate on further building your reputation as a successful business operator.

Parts inventories are scheduled when you need them; weekends, weekdays or evenings are flexible options to reduce or eliminate the impact the physical count has on your ability to serve your customers effectively.

The RGIS program puts more power in the hands of Auto Dealers by streamlining the flow of inventory information that is critical to managing your business.

Our company is actively involved in and deeply committed to creating lifelong customers.

Streamline Your Parts Inventory While Reducing Costs

Our program can help you:

- Correct bin labeling.
- Update parts to location reporting.
- Eliminate hand written inventory sheets.
- Improve the accuracy of data capture by scanning bin labels and barcoded part numbers.
- Reconcile results with real time reporting of expected on hands verses actual on hands.
- Provide electronic feed of the inventory results to your DMS system.

The mission of RGIS is to provide comprehensive, state-of-the-art, nationwide inventory services for Auto Dealers seeking to optimize the quality and cost efficiency of their inventory processes.

**RGIS can assist in keeping
your staff doing
what they do best –
serving your customers.**

***Offering accurate, cost-effective and
headache-free inventory
solutions has made RGIS the most
respected name in the industry.***

Knowledgeable Personnel

RGIS Management is available to assist you in developing inventory programs to best suit your needs. Our trained and certified automotive inventory team, deployed nationwide, is ready to provide efficient and accurate service in a time frame that won't affect customer service.

Current Equipment

We employ data capturing techniques that are compatible with the industry's ever-changing inventory tracking systems. Our main-frame computer systems are capable of quickly processing and returning inventory results to you efficiently.

Proven Methods

Our systematic and uniform counting, data recording, inventory flow and data reporting are the leading processes worldwide. We guarantee timely return of detailed inventory reports to your location or corporate headquarters.

Impartiality

A non-biased count conducted by professionals who know and understand the importance of an accurate inventory. Clients also inform us that their CPA firms do less auditing of physical counts when they are conducted by an outside service.

Safety

RGIS uses industry standard utilities designed to keep your physical inventory information safe and secure.

Reputation

The RGIS reputation is one of our greatest assets. Providing the quality service of accurate and efficient inventories since 1958 has been our cornerstone. Our ability to professionally manage the inventory process from planning through processing, allows you to concentrate on further building your reputation as a successful business operator.
